

SUMMARY

I'm an Infrastructure Strategist focused on keeping systems stable, secure, and ready to grow. I manage everything from network security and IT operations to building fast, reliable WordPress and WooCommerce sites. Alongside that, I dig into data—analyzing trends, building dashboards, and turning numbers into useful insights. I code actively in Java, PHP, Next.js, Node.js, and Python/ML to solve technical challenges and tie solid systems and smart data directly to business results.

SKILLS

- Languages:

Java, PHP, SQL, Python, JavaScript, C++, C, HTML, CSS
- Technologies:

WordPress, WooCommerce, Unreal Engine (Pixel Streaming), Next.js, Node.js, MySQL / MariaDB, GCP (Google Cloud Platform), Docker, Kubernetes, Figma (UI/UX Design), Spark, Hadoop, Hive, Prophet, ARIMA, LSTM, Google Analytics, HubSpot, Network/Hardware Troubleshooting, User/Access Provisioning, System Security.

PROJECTS

- 1

Real Time Product Management Dashboard

Project Link

A high-performance, real-time product management dashboard engineered with a modern full-stack architecture: Next.js (using TypeScript) on the frontend, powered by Node.js and Firebase for backend operations. This application features live data synchronization, enabling instantaneous updates (CRUD operations) on the dashboard whenever product data changes. Key functionality includes a real-time pie chart visualization for immediately tracking active versus inactive product inventory.
- 2

Works Lover E-commerce Platform

Project Link

A full-lifecycle development project for the Works Lover e-commerce website, built on WordPress and the WooCommerce framework. I handled the entire process for the client, from initial setup and custom site design through deployment to a live production environment. The work included comprehensive platform management, securing the site, optimizing performance, and managing the product inventory and categorization (Men, Women, Accessories) to ensure a robust and feature-rich digital storefront.
- 3

Time-Series Forecasting: Stock Prices

Project Link

This project is a comprehensive machine learning task focused on forecasting future stock prices using a public dataset of historical closing prices. I developed and compared both traditional statistical models (ARIMA) and modern deep learning/ML models (LSTM and Prophet). The project used rolling window evaluation for rigorous accuracy measurement and culminated in a full performance comparison using metrics like RMSE and MAPE.
- 4

Smart Health Consulting System

Project Link

This project is a Smart Health Consulting System designed to offer preliminary diagnostic assistance based on patient-reported symptoms.
- 5

Unreal Engine Pixel Streaming Deployment (Interactive Vehicle Simulation)

Project Link

This project involved managing the end-to-end development and deployment of a fully interactive Unreal Engine (UE) vehicle simulation. The work included creating the application from scratch, implementing input handling for real-time control (up, down, left, right), and configuring the Pixel Streaming plugin within the Unreal Editor. The final application was packaged and deployed to the Eagle 3D Streaming (E3DS) platform using the proprietary E3DS automation tool, making the high-fidelity UE simulation accessible via a single link.
- 6

Bus Ticket Counter

Project Link

This project is a comprehensive Bus Ticket Counter System developed entirely in Java. It serves as a simulation or application for managing the core business logic of a ticketing operation.

EDUCATION

2017 - 2022	North South University BSc. in Computer Science and Engineering	University
2014 - 2016	Ideal College, Dhanmondi Higher Secondary Certificate	College
2004 - 2014	Dhanmondi Govt. Boys's High School Secondary School Certificate	School

EXPERIENCE

- 12/2025 – Present **WordPress Developer** **Ekomedia**
- Develop high-performance SEO properties by converting custom HTML templates into scalable WordPress architectures, utilizing ACF and Custom Post Types to build flexible, data-driven content structures.
 - Execute advanced technical SEO integration, specifically engineering JSON-LD Schema Markup and semantic HTML5 hierarchies to maximize visibility and search engine authority for competitive service-based industries.
 - Optimize site performance and Core Web Vitals, implementing sophisticated front-end techniques like image compression, lazy loading, and CSS optimization to ensure sub-second load times and mobile-first compliance.
 - Oversee end-to-end quality assurance and deployment, conducting rigorous cross-browser testing and Rich Results validation to ensure every deliverable meets strict technical and design specifications.
- 7/2024 – Present **IT Administrator** **Cafe Lavista**
- Architected and deployed three high-priority WordPress web properties for the company director, personally managing the full project development lifecycle from initial requirements gathering to final production deployment.
 - Engineer platform stability and reliability for the company's main website, continuously implementing security hardening, performance optimization techniques, and content delivery best practices.
 - Provide advanced Tier 2/3 technical support and troubleshooting for remote teams, resolving complex hardware, software, and network configuration issues to guarantee seamless business continuity.
 - Spearhead all system-level IT administration, including implementing new technical solutions to enhance team productivity and managing access control (user credentials, email, and account provisioning) across all environments.
- 7/2023 – Present **Data Analyst** **Eagle 3D Streaming**
- Track, analyze, and report user and business data across all major platforms using Google Analytics (GA4), Google Tag Manager, YouTube Analytics, and platform-specific dashboards to support data-driven decisions.
 - Build clean, interactive Looker Studio dashboards that visualize key business and marketing KPIs — including subscriber growth, conversion rates, user minutes, retention, and revenue trends — for real-time monitoring by leadership and marketing teams.
 - Set up and maintain full event tracking, custom triggers, and conversion tags through Google Tag Manager to capture accurate user behavior across web, streaming, and YouTube channels.
 - Champion a data-driven culture across business and marketing teams by translating complex data into clear, actionable insights.
- 1/2023 – 6/2023 **IT Support Engineer** **n2sys Technology**
- Installed and configured computer hardware, software, networks, and applications to meet business needs.
 - Provided technical support by responding to staff and client inquiries, diagnosing system and network problems, and communicating effective solutions.
 - Maintained and monitored all systems and networks to ensure continuous operation and peak performance.
 - Troubleshoot and resolved software and hardware faults, minimizing downtime and improving productivity.
 - Supported the successful deployment of new applications and documented solutions for future reference.
- 8/2022 – 12/2022 **Coding Teacher** **Codingal**
- Taught coding and computer applications to 4th and 5th-grade students using the organization's curriculum.
 - Designed customized learning paths for students, helping them achieve their specific educational goals.
 - Monitored student progress and provided one-on-one assistance to ensure a positive and effective learning experience.
 - Promoted and sold courses as a sales executive, driving enrollment and contributing to the organization's growth.
- 5/2022 – 7/2022 **Associate** **Quantanite**
- Executed data entry tasks as part of a larger data processing system, ensuring timely delivery and quality control.
 - Cooperated with team members to ensure seamless workflow and maintain high-quality data standards.
 - Performed data validation and manipulation to ensure the accuracy and integrity of all data.
 - Contributed to the evaluation and implementation of new data processing technologies to improve operational efficiency.
 - Managed data processing systems to support and streamline key business workflows.
